Smart Helmet: Hardware Questions for Later

Certificates, repairs, the lamp clip, the camera and the battery. To follow once the software is working.

Prepared for **Thella Group Services and Imperium Corporate** Prepared by **90Ten Group** 20 October 2026 v1.00

01 The hardware questions

No.	Question	Why we ask
1	Which certificates does the helmet have for South Africa? Can you send us a copy of each?	Mines will ask for proof before any helmet goes underground. We have seen none yet.
2	The helmet is made abroad. Can the supplier send spare parts such as a camera that is broken or not clear, a battery or a shell? Can a local technician fit them? Can we have a repair guide and the warranty terms?	We cannot send a helmet overseas every time something breaks. The documents show no repair or parts information.
3	Can a mine's own lamp be fixed to the helmet? Is there a clip and what does it cost to make one? Does the helmet have its own light?	Mines already own lamps. We want to keep them.
4	How well does the camera see in the dark?	The picture must be clear enough to see what is happening.
5	How many hours does the battery last with the camera on? How long can the memory card record?	A shift is long. The helmet must last it.
